

OPERATIONAL ANALYTICS

# Queue Length Detection

Deliver a smoother, faster customer experience by monitoring when queue length is in violation within a certain region of interest for persons and vehicles.

Queue management is crucial to ensure timely customer service. Businesses can effectively monitor when customers extend past a certain point in the queue, with alerts triggered when the number of detections inside the regions of interest are greater than the "Maximum Queue Length" for a customizable amount of customers waiting.

## MEASURABLE EFFICIENCY

Identify training opportunities to improve employee efficiency.

## CUSTOMERS SERVED

Track excessive line lengths and get notified when assistance is needed.

## REMOTE MANAGEMENT

Oversee operations from anywhere on any device.
