

## PANEL PIEZO NOTIFICATIONS

### Simon XT

A Panel Piezo Beep is an audible beep that notifies you of a trouble condition such as a low battery, power failure, communication trouble, etc. For your safety Guardian Protection Services recommends that the panel piezo beeps are enabled on your system. Having the beeps enabled will ensure that your system notifies you of the entry and exit delay time by beeping upon entry and exit of your home.

If a Customer Care Representative has assisted you in disabling your panel piezo beeps, please follow the below instructions to enable the notifications once the system issue has been resolved.

STEP 1	Scroll through the menu using the arrow buttons and choose <b>SYSTEM PROGRAMMING</b>
STEP 2	Press the <b>OK</b> button
STEP 3	Enter your 4-digit master code
STEP 4	Press the <b>OK</b> button
STEP 5	Scroll through the programming menu using the arrow buttons and choose <b>SIREN OPTIONS</b>
STEP 6	Press the <b>OK</b> button
STEP 7	<b>PIEZO BEEPS</b> will display and status will show <b>OFF</b>
