

# LEGEND

**Smoke Detectors and Heat Detectors** – NFPA compliant U.L. Listed smoke and heat detectors are part of an engineered life safety system that is connected to Guardian's U.L.-certified 24-hour monitoring centers where rapid notification to first responders occurs, helping to ensure protection for people and assets.

**Access Control Readers** – Contactless proximity card readers provide employees with controlled access to facilities which can be managed remotely. This allows for real-time addition and removal of individual users from our mobile friendly app. Reports can provide an audit trail of both authorized and irregular activities.

**Fire Alarm Pull Stations** – Single and dual-action pull stations are an added level of alarm initiation which may provide even faster activation in the event of a fire. Semi-annual testing required by code can also be provided.

**CCTV Domed Cameras** – 8mp (4k) cameras have four times the resolution of 2mp HD, allowing finer details to be viewed when digitally zooming in. Low light is no problem with enhanced resolution and definition across a wide spectrum of ambient lighting conditions.

**Intrusion Detection** – Asset protection and threat management systems featuring motion detection, panic buttons, and keypads with burglary, fire, and panic buttons connected to Guardian's U.L.-certified 24-hour monitoring centers. Includes mobile app that transforms it into a business management tool.

**Surveillance Featuring Two-Way Audio and Digital Deterrents** – Fully featured cameras that allow audio communication capability between you and the intruder or visitor that the camera is viewing. Additional radio equipment may be necessary.

**Surveillance for Human Detection, Vehicle Detection, and Line Crossing** - Cameras with advanced analytics that will send notifications when people and vehicles are detected and counted. Motion driven event notification allows you to monitor activity in real time.
